VI- Reading Comprehension (80 Marks)

80

Read the following passage carefully, then answer the questions below:

How many things can you see in the night sky? On a clear night you might see the Moon, some planets and thousands of sparkling stars. You can see even more with a telescope. You might see stars where before you only saw dark space. With bigger and bigger telescopes you can see more and more objects in the sky. And you can see those objects in more and more detail.

But scientists believe that there are some things in the sky that we will never see even with the biggest telescope in the world. That is because they are invisible and **mysterious**. They are dead stars which are called black holes. You might find it hard to imagine that stars die. After all, our Sun is a star. Year after year we see it up in the sky, burning brightly, giving us heat and light. The Sun certainly doesn't seem to be getting old or weak. But stars do burn out and die after billions of years.

As a star's gases burn, they give off light and heat. But when the gas runs out, the star stops burning and begins to die. As the star cools, the outer layers of the star pull in toward the center. The star squashes into a smaller and smaller ball. If the star is very small, it ends up as a cold, dark ball called a black dwarf. If the star is very big, **it** becomes lesser and lesser until it's packed together tighter than anything else in the universe.

Imagine if the Earth were crushed until it was the size of a tiny marble. That's how tightly this dead star, a black hole, is packed. What pulls the star in toward its center with such power? It's the same force that pulls you down when you jump - the force called gravity. A black hole is so tightly packed that its gravity sucks in everything even light. The light from a black hole can never come back to your eyes. That's why you see nothing but blackness. So the next time you stare up at the night sky, remember: there's more in the sky than meets the eye!

From a, b, c and d, choose the correct answer: (8x10 = 80 Marks)

27- The best title for the passage is:

- a- **The Black Holes**
- b- The Burning Sun
- c- The Force of Gravity
- d- Modern Telescopes

28- What does the underlined word " **mysterious** " in paragraph (2) mean?

- a- colourful
- b- ordinary
- c- huge
- d- **strange**

29- What does the underlined word " **it** " in paragraph (3) refer to?

- a- ball
- b- **star**
- c- center
- d- dwarf

30- The black hole doesn't reflect light because:

- a- most black holes are very far from the earth.
- b- the layers of a star are pulled outwards when it cools.
- c- **the gravity of the black hole pulls the light inside it.**
- d- the star is giving off heat and light when its gases burn.

31- According to paragraph (2), what are black holes?

- a- They are very big stars in size.
- b- **They are invisible dead stars.**
- c- They are stars which give us heat and light.
- d- They are tiny stars which we can see with a telescope.

المجال الدراسي: اللغة الأجنبية الأولى (الإنجليزية) امتحان الصف العاشر- نهاية الفترة الدراسية الثانية - 2018/2019

- 32- How many things can you see in the night sky?
- The moon, some planets, stars and black holes
 - The moon, some planets and thousands of stars**
 - The sun, the moon, some planets, stars and black holes
 - The sun, the moon some planets and thousands of stars
- 33- Which of the following statements is **NOT TRUE**?
- Black holes are invisible unlike other bright objects in the sky.
 - Black holes can be seen easily without using telescopes.**
 - Black holes are dead stars that are pulled in towards the center.
 - Black holes become tighter than anything else in the universe.
- 34- The author's main purpose in writing this passage is to:
- show how the sun gives heat and light.
 - show the importance of using modern telescopes.
 - make people aware of the unknown objects in the sky.**
 - make scientists look for other ways to see stars in the sky.

VII- Summary Making (60 Marks)

60

Read the following passage, then do as required:

Harsh conditions in deserts, especially the lack of water, don't allow many living things from living in these places. However, there are some annual plants, which through their wonderful ways, have managed to survive these difficult conditions. One way is that they usually depend on their extremely short, active life cycles. In events of sudden rain, the plant seeds breed and grow very quickly to make full use of the rainwater. Then, their flowers bloom and set seeds that grow quickly in the hot sun, too. In addition, such plants usually have special means of storing water.
